

# Practice Transformation Network Initiative (PTN)

*CCNC gives providers innovative tools and supports to help deliver high-quality, value-based care in an efficient practice setting.*

## Our Goal: Help ensure the viability of your practice under Medicare and Medicaid reimbursement changes

- **We can help you prepare your practice for value-based reimbursement**
  - Improve your practice's workflow and efficiency
  - Provide Practice Transformation coaches – on-the-ground experts in quality improvement, process efficiencies, care coordination, and patient engagement
  - Connect you with local and national physician leaders for collaborative learning
  - Connect you with proven, practical tools to support practice transformation, optimize revenue and achieve sustained results, with free CME and MOC credit
  - Earn performance improvement credit for the Medicare Quality Payment Program. PTN enrollment in 2018 will prevent a negative payment adjustment in 2020, and participation in PTN activities may contribute to a positive payment adjustment
  - Analyze your practice's efficiency so you can reduce unnecessary testing, make smart referrals, and work more effectively with specialists
- **Leverage the power of informatics**
  - Gain insights into quality, cost and utilization performance for your Medicaid and Medicare population in preparation for Medicaid reform, MIPS, and/or participation in accountable care contracts or other Alternative Payment Models
  - Identify which patients are most “impactable” through targeted interventions
  - Track patient satisfaction through a web-based reporting tool provided by CCNC with real-time feedback from patients
- **Help you deliver “whole person care”**
  - Your most complex patients likely have multiple chronic illnesses as well as behavioral health co-morbidities. Implement strategies to improve outcomes
  - Your practice will be considered for inclusion as one of the 84 primary care practices selected as “behavioral health practice integration models”
- **Clinical Pharmacy Integration**
  - UNC School of Pharmacy experts will work with you to streamline and ramp up team-based medication management strategies to increase adherence and patient outcomes
  - Integrate your medical home team with community pharmacists who have frequent contact with your patients and opportunity to engage them to improve compliance with your treatment recommendations

## Five Phases of Practice Transformation
